Karachi, Pakistan

Profile Summary

Software Engineer & React Native Specialist with a focus on high-scale mobile architecture and Developer Experience (DX) tooling. Expert in bridging the gap between design and production through the development of Automated Design Validation and Transpilation Engines (Code Craft). Proven track record of optimizing engineering workflows, leveraging Cursor and Claude to deliver high-performance, 90% test-covered React Native applications. Specialist in revenue engineering and full-stack integrations (Stripe/RevenueCat).

Technical Skill

- **Mobile & Frontend:** React Native, TypeScript, JavaScript (ES6+), React.js, Redux/Context API, Tailwind CSS.
- **DX & Automation:** Figma API, AST Mapping, Design System Validation, CLI Development, Heuristic Filtering.
- **Engineering Productivity:** Cursor (Power User), Claude 3.5/3.7/Opus, LLM-Prompt Engineering.
- **Backend & Integrations:** Node.js, MERN Stack, RESTful APIs, Stripe, RevenueCat, Printify SDK.

Work Experience

React Native Developer-Freelance

March'26-Present

- **Collaborative App Delivery:** Partnered within a development collective to architect and ship production-ready mobile apps using Expo and React Native.
- **Feature Engineering:** Successfully implemented secure Stripe payment gateways and robust Push Notification systems, ensuring high user engagement and seamless transaction flows.
- **Team Lifecycle Management:** Led the end-to-end deployment process for freelance projects, managing everything from design handoffs to App Store/Play Store releases.

Software Engineer -VentureDive

Jan'26- April'26

- **Systems Architecture (Code Craft):** Engineered a CLI-based Figma-to-React Native transpiler, utilizing AST mapping to automate multi-screen generation and reducing UI development cycles by 60%.
- **Design-Ops Tooling (Validator):** Developed an automated Figma Validator tool that audits design files for compliance with the "ethr" component system, ensuring seamless compatibility for automated code generation.
- **Workflow Optimization:** Leveraged Cursor and Claude to maintain 90% unit/integration test coverage across core tooling, ensuring high-fidelity transpilation and robust system reliability.

React Native Developer -Meta Frolic Labs Pvt Ltd

April '25-December'25

- **Product & Revenue Engineering:** Architected full-stack IAP, subscription flows (RevenueCat), and secure Stripe payment gateways, directly increasing Monthly Recurring Revenue (MRR) and automating product customization via the Printify SDK.
- **Performance & Retention:** Developed low-latency chat systems and automated Push Notifications to boost user retention, while optimizing app performance through Redux/Context API and efficient API caching.
- **Cross-Functional Delivery:** Partnered with UI/UX teams to translate high-fidelity designs into performant, cross-platform code, maintaining version control and seamless integration via Git.

Live Projects

PetsCarePlus- A specialized service marketplace connecting pet owners with grooming professionals, featuring real-time provider chat, dual-sided registration flows, and Stripe-powered payment processing.

FinalPassDown-A secure, high-integrity document vault designed for legacy planning, allowing users to safely store and transition critical documents to beneficiaries for end-of-life preparedness.

JoyfulBooks-A controlled social media ecosystem for parents, integrating Unity-based educational games and a subscription-based monetization model via RevenueCat.

Education

University of Karachi – UBIT (Department of Computer Science)

2021-2025

Bachelor of Science in Computer Science (BSCS)
